SKILLS

- Languages:** Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- Backend:** FastAPI, Django, Node.js
- Frontend:** Next.js, React, React Native
- Databases:** PostgreSQL
- Tools & DevOps:** Docker, Git, GitHub, Vercel, Render, Postman, NGINX
- Engineering/Design:** CATIA V5, CREO PARAMETRIC, Teamcenter
- Certification:** Green Belt

EDUCATION

Computer Science, Online Courses

Harvard University - Remote

2022-2023

CS50W

Web Programming with Python and JavaScript

CS50P

Introduction to Programming with Python

CS50X

Introduction to Computer Science

Mechanical Engineering

Universidade Federal do Paraná

2010-2017

Mechanical Engineering

Budapest University of Technology and Economics

2014-2015

SUMMARY

Full-stack software engineer specializing in high-performance microservices architectures and scalable web applications. With a foundation in product development engineering, I bring analytical rigor to modern software design. I currently lead the end-to-end development of a global SaaS platform, utilizing Next.js, FastAPI, and Django, backed by 100% containerized DevOps environments. Combined with my experience designing enterprise integrations and acting as a technical consultant, I excel at translating complex technical requirements into robust, secure, and easily maintainable cloud solutions.

WORK EXPERIENCE

Full Stack Engineer

MuscleWiki SEZC: <https://api.musclewiki.com>

2025--present

I am leading the end-to-end development of a SaaS fitness platform with a microservices architecture, serving over 1,800 workouts with 7,300+ video demonstrations for mobile and web applications.

- Modern Frontend:** Responsive and high-performance interface with Next.js and TypeScript, using React 19, TailwindCSS, and Zod for form validation. Automated testing with Jest and Playwright (E2E). Production error monitoring with Sentry.
- Hybrid Backend Architecture:** Dual-backend system with FastAPI (data/media streaming, high concurrency) and Django + DRF (user management, admin panel, CMS). Both share the same PostgreSQL database with asynchronous connection pooling.
- Billing & Monetization:** Full integration with Paddle.com for subscription management with four tiers (Free/Pro/Ultra/Mega). I implemented webhook verification with HMAC-SHA256, protection against replay attacks, and enforcement of usage quotas (429) with multi-level TTL caching.
- Security & Authentication:** Multi-layered system with API Key, JWT. Protection against path traversal with Path.relative_to(), OWASP security headers, CSRF protection via Sec-Fetch-Site, cookies with __Host- prefix (RFC 6265bis), and brute-force protection with django-axes.
- Observability:** Monitoring stack with Prometheus (30+ custom metrics: latency, cache hit rate, bandwidth) and Grafana, plus Sentry with configurable sampling per environment.
- DevOps & Infrastructure:** 100% containerized ecosystem with Docker Compose + Nginx. Container hardening with Linux capability restrictions, read-only filesystems, and resource limits. CI/CD pipeline with 7 workflows on GitHub Actions (tests, build, lint, deployment in staging) and Dependabot for automatic dependency updates.
- Code Quality:** 465+ automated tests with 100% approval (FastAPI + Django). Formatting with Black, linting with Ruff, type checking with mypy and pre-commit hooks throughout the codebase.

WORK EXPERIENCE

Technical Consultant

I operate at the intersection of business processes and software engineering for Pipefy's Enterprise clients. I specialize in extending the platform's capabilities by architecting and implementing complex technical solutions through custom integrations, APIs (GraphQL/REST), and robust automation.

- **Integration Engineering:** Connecting Pipefy with complex enterprise tech stacks (ERPs, CRMs, and databases) by developing secure middlewares and data pipelines.
- **Hands-on Problem Solving:** Leveraging my software engineering background (Python/Next.js) to write custom code, scripts, and webhooks when native features require technical extension.
- **Solutions Architecture:** Translating intricate enterprise business rules into highly scalable logical workflows, ensuring data governance and optimal performance.
- **Technical Advisory:** Serving as the trusted bridge between the client's engineering teams and Pipefy's ecosystem, driving high-impact architectural decisions.

Full Stack Developer & Software Architect (Personal Project)

ReservaQuadra: <https://reservaquadra-project.vercel.app/>

2025-present

I conceived, architected, and developed ReservaQuadra, a SaaS platform for court scheduling, from start to finish, managing the entire development cycle, from conception to deployment.

- **Architecture and Backend:** I designed a high-performance backend with FastAPI (Python), utilizing modular architecture, dependency injection, and asynchronous operations for scalability.
- **Modern Frontend:** I developed a responsive and optimized UI with Next.js, React, and TypeScript, utilizing Server-Side Rendering (SSR) for maximum performance and UX.
- **Database and ORM:** I modeled and managed the PostgreSQL database, using SQLAlchemy as the ORM and Alembic to control schema migrations.
- **Infrastructure and Deployment:** I configured the CI/CD pipeline with Docker to containerize the backend (deploy to Render) and the frontend (deploy to Vercel).
- **Systems and Integrations:** Integrated third-party APIs for critical features: Stripe (payments), Mapbox (geolocation and maps), and Twilio/SendGrid (WhatsApp/email notifications).
- **Advanced Features:** Implemented complex features such as an administrative dashboard, maintenance scheduling with automatic cancellation, and a statistics dashboard.

Full Stack Software Developer

Ágora Social Network

2023-2024

- I developed and maintained the application's user experience, using JavaScript, React Native, and Expo to create intuitive and responsive user interfaces for the social platform.
- I built and optimized backend endpoints with Node.js, ensuring efficient and reliable client-server integration.
- I led the implementation of a post segmentation system, using Artificial Intelligence in the backend to optimize content distribution and generate relevant hashtags, improving user engagement.
- I ensured the quality and stability of the API through rigorous testing and endpoint validation with Postman, resulting in a more robust final product.

EDWARD WILMS

FULL STACK SOFTWARE DEVELOPER

WORK EXPERIENCE

Full Stack Software Developer

Construction / Incorporation Company

2023-2023

- I designed and developed a full-stack interactive quiz web application from scratch, using Python and the Django framework for all backend logic.
- I built the user interface with JavaScript, HTML, and CSS, focusing on a fun and intuitive gaming experience for end users.
- I implemented comprehensive management functionality, allowing users to create, view, edit, and delete their own quizzes.
- I designed and integrated a real-time multiplayer system, a complex feature that allowed multiple players to compete simultaneously, increasing engagement.
- I managed the application deployment process, ensuring the platform was online, functional, and accessible to the public.

Product Development Engineer

Electrolux Group

2016-2025

I led global fastener management within the Mechanical Modules Architecture team, focusing on standardization and cost and quality optimization in a multinational environment.

- **Technical Project Management:** I planned and executed new product development projects, managing schedules and acting as a central point of contact between cross-functional teams (Engineering, Quality, Logistics, Purchasing) to ensure project alignment and progress.
- **Complex Problem Solving:** I analyzed component failures in the field, developed laboratory tests to replicate and troubleshoot issues, and identified design improvement opportunities to optimize costs and quality.
- **Global Collaboration:** I worked effectively within a multinational team, collaborating with suppliers and international stakeholders to approve technical specifications and develop new solutions.

Technical Documentation Analyst

Volvo

2012-2014

- I acted as the technical bridge between customer needs and engineering teams, translating specific requirements into viable solutions for medium- and heavy-duty vehicles.
- I collaborated with cross-functional teams at national and international levels, including production planning, sales engineering, and suppliers, to ensure the successful implementation of vehicle modifications.
- I managed complex technical processes involving everything from minor to major modifications, ensuring the alignment of all stakeholders to meet specific customer demands.
