

Edward Wilms

FULL STACK SOFTWARE DEVELOPER

wilms.edward@gmail.com · +55 41 9 9244-1686 · Curitiba, Brazil · [linkedin.com/in/edwardwilms](https://www.linkedin.com/in/edwardwilms) · edwardwilms.github.io

Summary

Full-stack software engineer building high-performance microservices and scalable web platforms. Currently leading end-to-end development of a global SaaS product on Next.js, FastAPI, and Django over a 100% containerized stack, alongside enterprise integration work as a technical consultant. Background in product development engineering, used to translating intricate technical requirements into secure, maintainable cloud systems.

Skills

LANGUAGES	Python · JavaScript · TypeScript · SQL · HTML5 · CSS3
BACKEND	FastAPI · Django · Node.js
FRONTEND	Next.js · React · React Native
DATABASES	PostgreSQL
TOOLS & DEVOPS	Docker · Git · GitHub · Vercel · Render · Postman · NGINX
ENGINEERING / DESIGN	CATIA V5 · CREO Parametric · Teamcenter
CERTIFICATION	Green Belt

Experience

Full Stack Engineer

2025 — PRESENT

MuscleWiki SEZC · api.musclewiki.com

Leading end-to-end development of a SaaS fitness platform with a microservices architecture, serving 1,800+ workouts and 7,300+ video demonstrations across mobile and web.

- **Modern Frontend:** Responsive, high-performance UI on Next.js, TypeScript, React 19, TailwindCSS, and Zod, with Jest + Playwright (E2E) automated testing and Sentry for production error monitoring.
- **Hybrid Backend:** FastAPI for high-concurrency data/media streaming alongside Django + DRF for users, admin, and CMS, both sharing one PostgreSQL with async connection pooling.
- **Billing & Monetization:** Paddle integration across four subscription tiers (Free/Pro/Ultra/Mega) with HMAC-SHA256 webhook verification, replay-attack protection, and 429 usage quotas backed by multi-level TTL caching.
- **Security & Auth:** API Key + JWT, path-traversal protection via Path.relative_to(), OWASP headers, CSRF via Sec-Fetch-Site, __Host- cookies (RFC 6265bis), and django-axes brute-force protection.
- **Observability:** Prometheus + Grafana with 30+ custom metrics (latency, cache hit rate, bandwidth) and Sentry sampling configured per environment.
- **DevOps & Infrastructure:** 100% containerized with Docker Compose + Nginx, hardened containers (capability restrictions, read-only FS, resource limits), 7-workflow GitHub Actions CI/CD, and Dependabot.
- **Code Quality:** 465+ automated tests at 100% pass rate, with Black, Ruff, mypy, and pre-commit hooks across the codebase.

Technical Consultant**Pipefy**

Operating at the intersection of business processes and software engineering for Pipefy's Enterprise clients. I specialize in extending the platform's capabilities by architecting and implementing complex technical solutions through custom integrations, APIs (GraphQL/REST), and robust automation.

- **Integration Engineering:** Connecting Pipefy with complex enterprise tech stacks (ERPs, CRMs, and databases) by developing secure middlewares and data pipelines.
- **Hands-on Problem Solving:** Leveraging my software engineering background (Python/Next.js) to write custom code, scripts, and webhooks when native features require technical extension.
- **Solutions Architecture:** Translating intricate enterprise business rules into highly scalable logical workflows, ensuring data governance and optimal performance.
- **Technical Advisory:** Serving as the trusted bridge between the client's engineering teams and Pipefy's ecosystem, driving high-impact architectural decisions.

Full Stack Developer & Software Architect

PERSONAL PROJECT · 2025

ReservaQuadra · reservaquadra-project.vercel.app

Conceived, architected, and developed ReservaQuadra, a SaaS platform for court scheduling, from start to finish, managing the entire development cycle, from conception to deployment.

- **Architecture and Backend:** Designed a high-performance backend with FastAPI (Python), utilizing modular architecture, dependency injection, and asynchronous operations for scalability.
- **Modern Frontend:** Developed a responsive and optimized UI with Next.js, React, and TypeScript, utilizing Server-Side Rendering (SSR) for maximum performance and UX.
- **Database and ORM:** Modeled and managed the PostgreSQL database, using SQLAlchemy as the ORM and Alembic to control schema migrations.
- **Infrastructure and Deployment:** Configured the CI/CD pipeline with Docker to containerize the backend (deploy to Render) and the frontend (deploy to Vercel).
- **Systems and Integrations:** Integrated third-party APIs for critical features: Stripe (payments), Mapbox (geolocation and maps), and Twilio/SendGrid (WhatsApp/email notifications).
- **Advanced Features:** Implemented complex features such as an administrative dashboard, maintenance scheduling with automatic cancellation, and a statistics dashboard.

Full Stack Software Developer

2023 — 2024

Ágora Social Network

- Developed and maintained the application's user experience, using JavaScript, React Native, and Expo to create intuitive and responsive user interfaces for the social platform.
- Built and optimized backend endpoints with Node.js, ensuring efficient and reliable client-server integration.
- Led the implementation of a post segmentation system, using Artificial Intelligence in the backend to optimize content distribution and generate relevant hashtags, improving user engagement.
- Ensured the quality and stability of the API through rigorous testing and endpoint validation with Postman, resulting in a more robust final product.

Full Stack Software Developer

2023

Construction / Incorporation Company

- Designed and developed a full-stack interactive quiz web application from scratch, using Python and the Django framework for all backend logic.
- Built the user interface with JavaScript, HTML, and CSS, focusing on a fun and intuitive gaming experience for end users.
- Implemented comprehensive management functionality, allowing users to create, view, edit, and delete their own quizzes.
- Designed and integrated a real-time multiplayer system, a complex feature that allowed multiple players to compete simultaneously, increasing engagement.
- Managed the application deployment process, ensuring the platform was online, functional, and accessible to the public.

Product Development Engineer

2016 — 2025

Electrolux Group

Led global fastener management within the Mechanical Modules Architecture team, focusing on standardization and cost and quality optimization in a multinational environment.

- **Technical Project Management:** Planned and executed new product development projects, managing schedules and acting as a central point of contact between cross-functional teams (Engineering, Quality, Logistics, Purchasing) to ensure project alignment and progress.
- **Complex Problem Solving:** Analyzed component failures in the field, developed laboratory tests to replicate and troubleshoot issues, and identified design improvement opportunities to optimize costs and quality.
- **Global Collaboration:** Worked effectively within a multinational team, collaborating with suppliers and international stakeholders to approve technical specifications and develop new solutions.

Technical Documentation Analyst

2012 — 2014

Volvo

- Acted as the technical bridge between customer needs and engineering teams, translating specific requirements into viable solutions for medium- and heavy-duty vehicles.
- Collaborated with cross-functional teams at national and international levels, including production planning, sales engineering, and suppliers, to ensure the successful implementation of vehicle modifications.
- Managed complex technical processes involving everything from minor to major modifications, ensuring the alignment of all stakeholders to meet specific customer demands.

Education

Harvard University — Remote

2022 — 2023

Computer Science, Online Courses · CS50X: Introduction to Computer Science · CS50P: Introduction to Programming with Python · CS50W: Web Programming with Python and JavaScript

Universidade Federal do Paraná

2010 — 2017

Mechanical Engineering

Budapest University of Technology and Economics

2014 — 2015

Mechanical Engineering
